Education

University of Western Ontario and Ivey Business School

Exp. Graduate 2027

Computer Science (BSc) and Honours Business Admin (HBA)

GPA: 3.7/4.0

- **Coursework:** Data Structures & Algorithms in Java, Systems Programming in Linux, Software Engineering with Python & Git
- **Clubs:** Western Founders' Network (VP), Western AI (VP), Hack Western ([Web Dev](#)), Western Dev. Society (Mentor)

Work Experience

Meta

Seattle, WA, US

Production Engineer Intern

Jun 2026 - Aug 2026

- Generated **over \$800K in annualized GPU cost savings** by designing an **agentic AI layer** that autonomously vets GPU job orders across 1.5M daily requests, blocking malformed, unauthorized, and crash-prone jobs before they consume GPU time.
- Improved **GPU job pre-flight checks 3.4x from 12s to 3.5s per request** by parallelizing the validation pipeline across 12K daily checks, clearing bottlenecks that delayed job starts under heavy production load with no added infrastructure cost.
- Engineered reporting tools, a CLI, and ETL pipelines **across 95+ GPU pre-flight policies and 100K daily jobs**, giving engineers live insight into per-job cost, errors, and AI-proposed policy additions via 18 aggregated metrics.

Meta

Menlo Park, CA, US

Production Engineer Intern

May 2025 - Aug 2025

- Simplified **fault injection setup by adding block and allow CLI commands** spanning targets like IP addresses, hostnames, tasks, and containers, for an internal tool run 790K times across 85 services, with 96% unit test coverage to ensure reliability.
- Scaled a **fault injection web UI to 136 engineers across 15 teams**, covering 95.6% of use cases and replacing a CLI-only workflow with self-serve access; authored the design docs defining its architecture and demoed it live to senior leadership.
- Added fault types to **expand coverage by 32% and cut recovery time**, re-architecting the engine in Rust for Meta's 100K fleet.

Western University

London, ON, CA

Case Author and Research Assistant

Feb 2025 - May 2025

- Published a case study on DeepSeek's open-source AI strategy, **taught to 1,000+ students in strategy, tech, and finance courses**; evaluated 3 monetization models for long-term viability and assessed the financial feasibility for open source models.
- Benchmarked DeepSeek vs. ChatGPT across three use cases, achieving 35% higher token efficiency, 1.2x faster responses.

Lillup

San Francisco, CA, US

Software Engineer Intern

May 2024 - Aug 2024

- Developed **5 AWS Bedrock and Lambda API features** used across 4 development teams, secured with IAM roles/policies.
- Processed **1,000+ requests using a LLaMA 3 RAG** model with query routing across three GraphDB vector corpora.

Projects

CityFlow | Python, NVIDIA Nemotron, DGX Spark, LangChain, FastAPI

NVIDIA Spark Hackathon

- Won **1st out of 100+ teams** in the Economic System track for an on-device AI agent that fuses 14+ real-time city data streams into actionable insights for small businesses; **live-streamed demo to 700+ viewers during a NVIDIA's livestream event**.

Hack Western 12 Personal Badge System | Next.js, TypeScript, tRPC, PostgreSQL

Hack Western 12 Web Org.

- Launched **Hack Western's first badge system** serving 500+ attendees, replacing 600+ physical badges with Apple Wallet passes.
- Built a **real-time hacker check-in system** for 9 meals and 13 events over 3 days, handling concurrent scans with zero failures.

Awards and Accolades

- **Accolades:** Scholarship of Distinction, Ivey Case Author, MLH Fellow (2.5% acceptance rate), Root Venture Capital Fellow S25
- **Awards:** Hack Western 9 & 11 Winner (70+ hackers), IBM Comp. Finalist (35 teams), Ivey Case Comp. Semi-Finalist (63 teams)

Technical Skills

- **Languages** – Python, Javascript, Typescript, Rust, PHP, Java, Bash, SQL, HTML, CSS, SASS, C, C++, R
- **Dev. Tools** – Git/GitHub, GitHub Actions, Amazon Web Services (AWS), Google Cloud Platform (GCP), Linux, Node.js
